

SMART CONTRACT SECURITY AUDIT - NFTMINTARENA

One-Page Visual Audit Report

Purpose: Paid NFT mint counter with configurable mint price and owner withdrawal.

Risk	Severity	SWC	OWASP
Minting only updates counters; no actual NFT ownership/token storage is created	High	N/A	SC02 Business Logic
Owner can set mintPrice to zero or arbitrary values	Medium	SWC-105	SC01 Access Control
Overpayments are accepted without refund logic	Medium	SWC-132	SC02 Financial Risks
Constructor lacks validation for zero maxSupply or inconsistent parameters	Low	N/A	SC05 Input Validation

Root Cause: The mint function emits events and updates counters but does not implement token ownership or ERC-721 mint semantics.

Business Logic Findings: Users may pay for a mint that only produces an event. Pricing is fully owner-controlled and excess payment stays trapped until owner withdrawal.

BENCHMARK METRICS

Time_seconds: 75 | Confidence: 0.93 | Total_findings: 4

Critical: 0 | High: 1 | Medium: 2 | Low: 1

Precision_estimate: 0.91 | Coverage_estimate: 1.00 | Risk_score: 68/100
